

# Case study

## Wimbledon High School

Bardon Asphalt was able to provide several solutions to ensure the playing area was quickly produced, cost effective and the ideal product for the customer's needs

### Key facts

**Key vendors:** Wimbledon High School

**Site:** Wimbledon High School

**Sector:** Education

**Client:** Wimbledon High School

**Contractor:** Academy Sports

- Best value
- Minimal disruption
- Easy accessibility to technical help

### Brief

- To create an updated playing area for a prestigious private school, with a proud sporting history
- Create a games area suitable for playing tennis, or other ball related games

### Solution

- Before work commenced on the new surfacing, parts of the old play surface that had rutted badly were completely removed and filled in to create a smoother working surface
- Leisuret看 Plus is a porous asphalt product which prevents the ponding of water on playing surfaces
- Leisuret看 Plus was ideal because the site involved a play area that was to be unpainted and used by a number of people. This being the case, the client thought the risk posed by the material softening in the summer and any subsequent damage issues could be much mitigated by the use of a harder and more resilient binder and material
- Minimal disruption during the construction process
- No need to lay a binder course or worry about the underlying base as this work had already been done
