

Express Asphalt
Colpatch

Colpatch

Designed to provide sustainable solutions

Colpatch is manufactured by Aggregate Industries on behalf of Colas Ltd and distributed nationwide through all Express Asphalt plants. Colpatch is a BBA/HAPAS approved storage grade macadam that is ideal for instant, high quality repairs to bituminous or concrete surfaces. The material is a combination of penetration grade bitumen, additives and selected aggregates.

Colpatch is a cold applied material that is safe, easy and quick to use. The special additive results in flexibility within the repair reducing the risk of reflective cracking. It also provides the long storage properties of Colpatch which enables the material to be stockpiled externally all year round without deterioration and remain workable in cold weather conditions.

To accommodate the customers' storage capability as well as their specific uses, the material is available in a variety of options: bulk open loads; 1 tonne bulk bags; 25kg sealed bags; and where emergency repairs are required we offer 20kg air tight buckets.

Colpatch is available in 6 and 10mm grades allowing it to be used for carriageway and footway repairs as well as reinstatement patching. The material provides a permanent repair to:

- potholes
- utility cuts
- patches
- small road repairs.

The more varying weather conditions have resulted in a rapid growth in the sales of Colpatch and it has fast become the popular solution for pothole/reinstatement repairs.

Colpatch is manufactured at lower temperatures and does not require the use of hot boxes to maintain workability like conventional hot mix products, with the benefit that less greenhouse gases are released into the atmosphere.

Colpatch has a shelf life of up to two years resulting in minimal waste; it's easy to store and even easier to handle. Conveniently packaged in bags and tubs, the material is simple to transport with collection available from our network of Express Asphalt plants.

Cost effective

Colpatch provides a permanent remedy for problems on asphalt and concrete surfaces.

The use of Colpatch saves time, labour and equipment costs minimising any disruption to traffic and the local community. Once treated, the surface can be trafficked on almost immediately after application.

An easily portable and pre-mixed solution, Colpatch provides a cost effective means of filling potholes and treating repairs, it is successfully being used for reinstatements around ironwork.

Sustainable

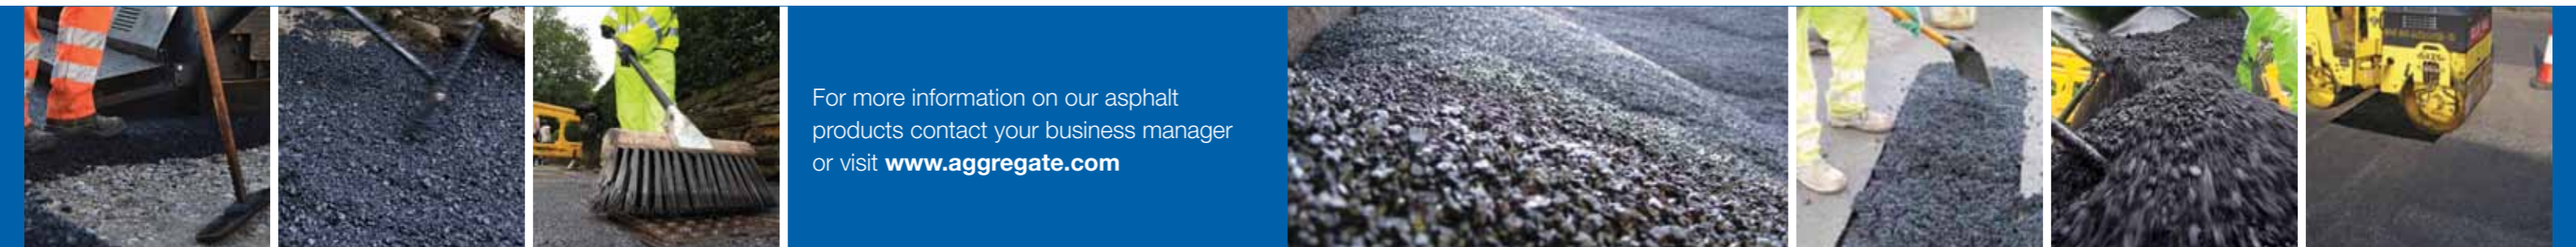

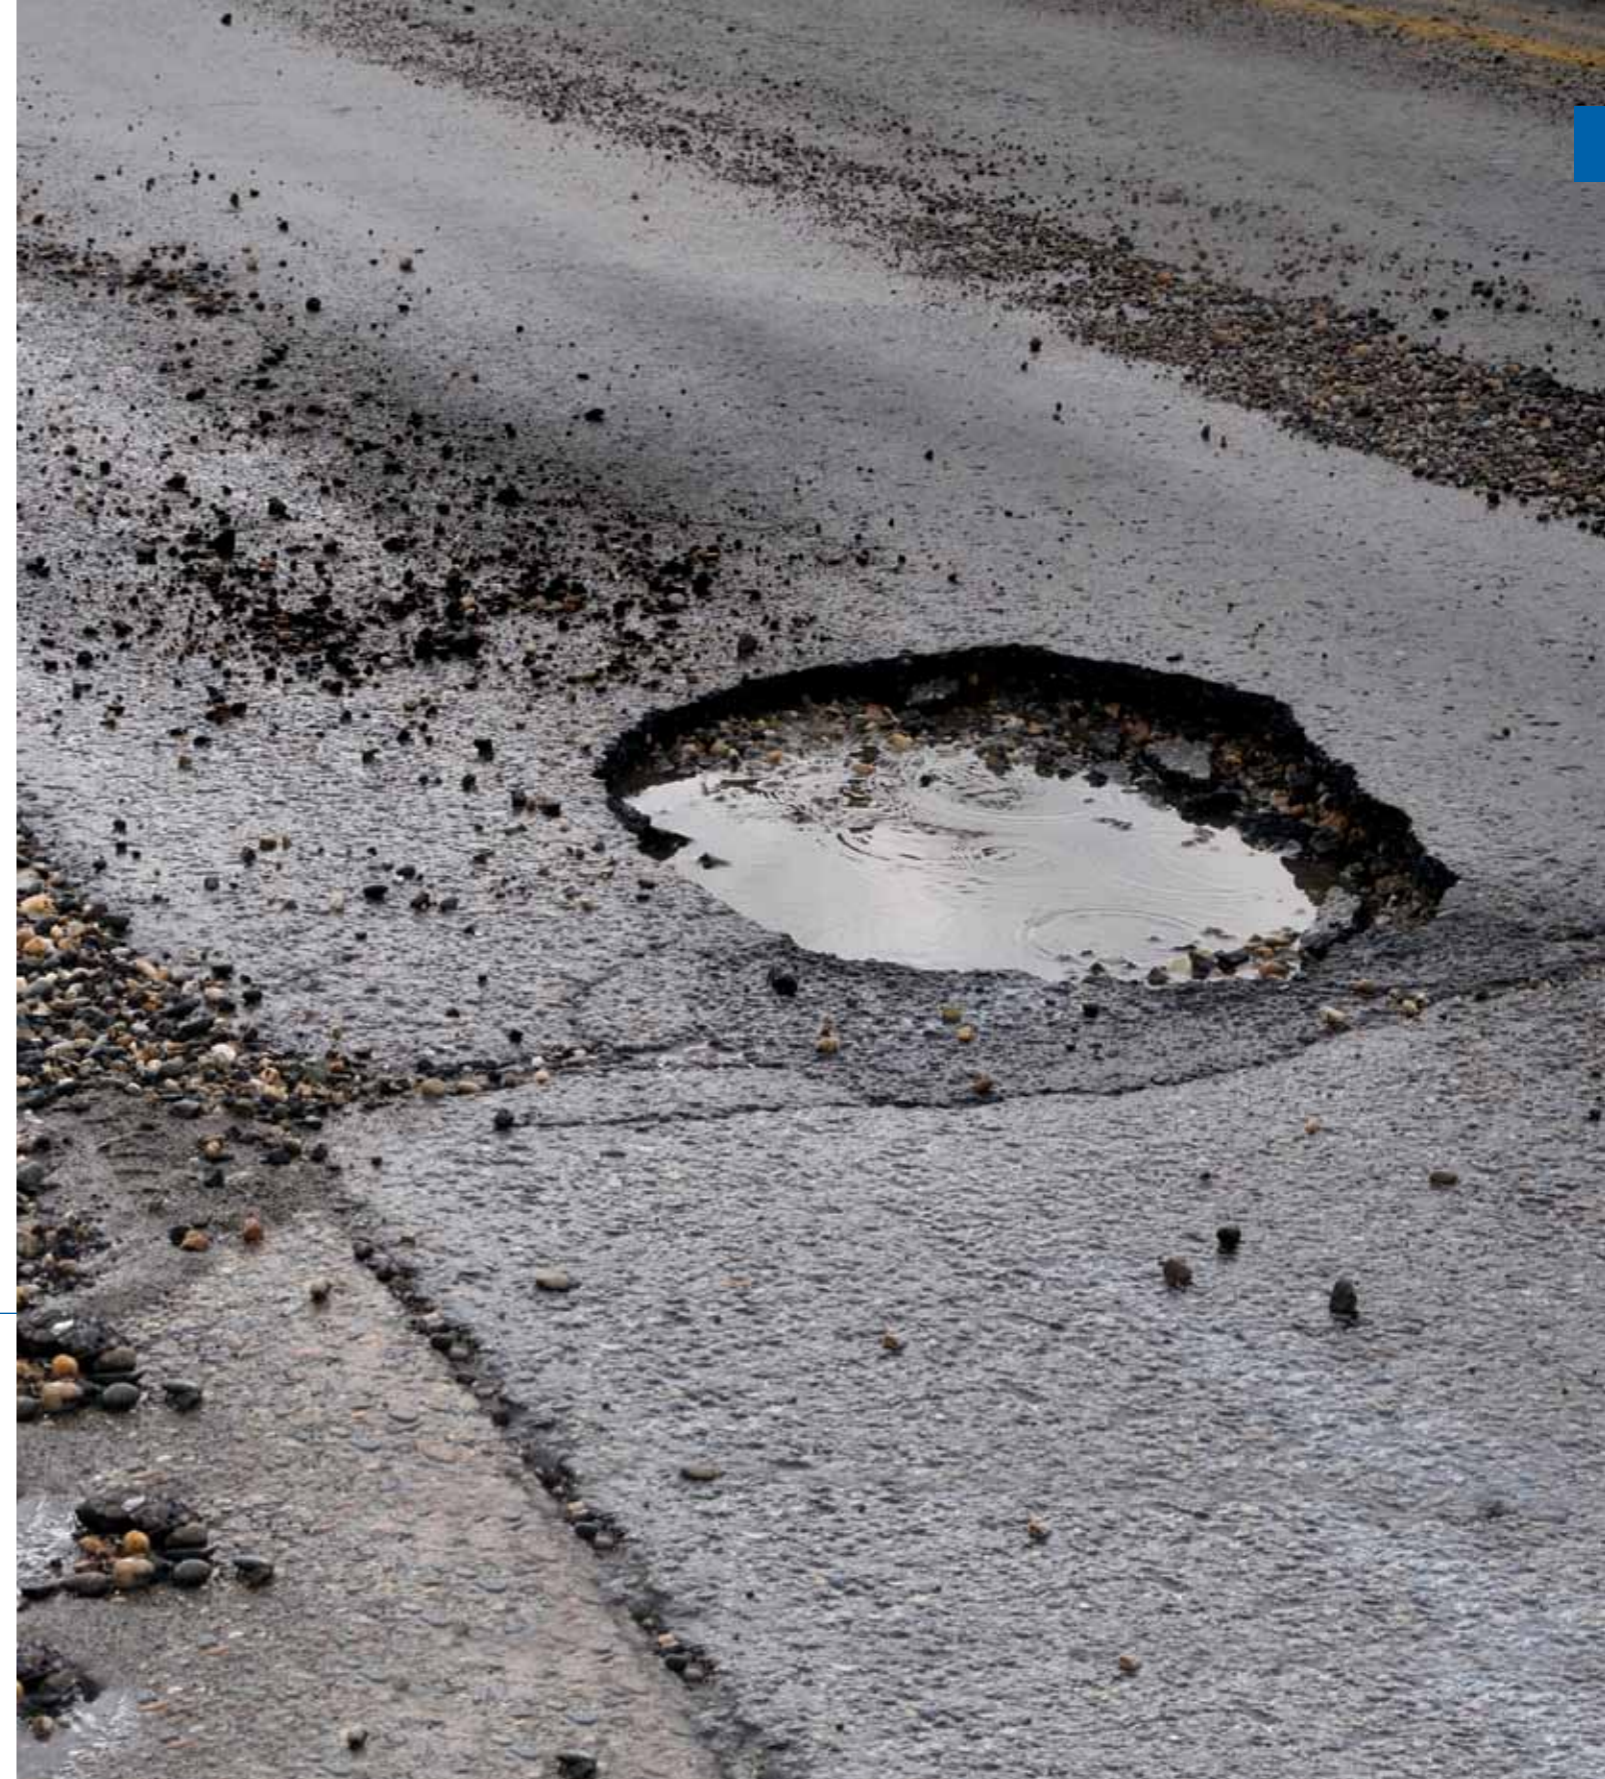

Colpatch offers a high quality, long lasting permanent repair using no noxious or dangerous fumes. The material helps protect against freezing/rain/rutting damage and can be utilised even in temperatures below freezing.

The MACFIX® additive within the material not only maintains road surfaces as a result of the treatment but also prevents deterioration in the future.

Colpatch incorporates MACFIX® licensed technology and using the special additive, provides an immediate lasting solution to potholes in roads, drives, car parks and many other surfaces. The MACFIX® additive used to make Colpatch contains no solvents, instead the ECO friendly formula of the additive results in virtually no VOC's therefore no harmful vapours are given off.

Colpatch is manufactured and presented by Aggregate Industries on behalf of Colas Ltd.

With over 80 years in manufacturing within the bitumen binder market, Colas Ltd supply an extensive range of products to local markets from strategically located depots.
