SUPERCOLOUR®

SuperColour is an eye-catching range of coloured asphalt that is suitable for a variety of architectural and decorative applications. Available in a choice of visually striking colours, SuperColour combines aesthetic appeal with the long lasting durability of traditional asphalt.

SuperColour can be used to create impact and design features in a multitude of different applications including:

- ▶ Industrial, commercial and domestic flooring
 - ▶ Civic monuments and surrounds
 - ▶ Roads
 - ▶ Pedestrian walkways
 - ▶ Communal areas
 - ▶ Public buildings
 - ▶ Footpaths and cycle tracks
 - ▶ Parking areas and driveways
-

With its exciting shades, SuperColour greatly enhances the architectural and visual appeal of asphalt, affording the client a much wider range of design opportunities.

The distinctive colours are achieved by combining asphalt, coarse aggregates and a wide range of pigments. Our batching plants use specific and dedicated mix designs and materials to ensure a consistent colour is attained.

A robust and hardwearing solution that offers permanent colouring, SuperColour can be supplied to comply with any specification or grade with a highly attractive and decorative finish.

RUSTIC

SuperColour Rustic is our range of coloured asphalt with black binder and red pigment.

We offer three different grades: SuperColour Rustic, SuperColour Rustic Advanced with higher pigment content and SuperColour Extra with red aggregate providing a bright finish that will remain visibly red throughout its life.

SUPERCOLOUR® ULTRA

SuperColour Ultra, uses a translucent binder which greatly enhances the architectural and visual appeal of asphalt, allowing the client a much wider range of design opportunity. The distinctive, solid colours are achieved by combining the translucent binder with sympathetically coloured aggregates and a choice from a wide range of pigments.

SUPERCOLOUR® EXPOSED

SuperColour Exposed, uses a standard, black bituminous binder and a naturally colourful aggregate. 8-10 weeks after installation, we expose the aggregate by using the high velocity impact method shot-blasting process to carefully remove the bitumen from the surface of material without affecting the materials long term durability. The resultant finish provides a subtle, natural colour that improves over time.
