

INTRODUCING SuperColour® Ultra

SuperColour® Ultra is a range of coloured asphalt products based around BS/EN SMA, dense and medium graded standard mixtures. SuperColour® Ultra utilises a translucent binder which greatly enhances the architectural and visual appeal of asphalt, for a much wider range of design opportunity. It comes in a variety of architectural and decorative applications, particularly where colour differentiation is deemed an important aspect such as private drives, cycleways and pedestrian areas. SuperColour® Ultra combines aesthetic appeal with the long-lasting durability of traditional asphalt.

WHY SUPERCOLOR® ULTRA?

ENHANCED SAFETY

Provides colour coded demarcation e.g. cycle lanes, bus lanes, restricted access etc. to improve visibility and safety in pedestrian areas.

LONG-LASTING

A robust and hard-wearing solution that offers permanent colouring. As the colour is integral to the asphalt this removes the risk of delamination, which is a common problem with painted asphalt surfacing techniques.

QUALITY ASSURED

Each material goes through a rigorous design and review process, with Aggregate Industries providing technical support from project start to finish.

SAVES TIME

Eliminates the need for painted finishing, and costly maintenance, through wear and tear of the painted surface.

DESIGN FLEXIBILITY

SuperColour® Ultra is available in a range of sizes 6, 10 and 14mm and can be provided in a wide range of colours. The colour is enhanced by the natural colour of specially-selected approved aggregates, complemented by the addition of pigments in a clear binder mixture.

WORKABILITY

Due to the nature of the synthetic binder this product can be transported further and remain workable for a greater period of time than standard asphalt materials.

TAILORED TO YOU

Contract specific mix designs. Our batching plants use specific and dedicated mix designs and materials to ensure a consistent colour is attained.

ECO-FRIENDLY

Create sustainable projects – all mixes can be supplied as SuperLow warm mix asphalt.
